

**COOL YOUR TURBO SO IT
DOESN'T BURN UP!**

**AUTOMATICALLY COOLS YOUR
TURBO - ENHANCES ENGINE
DURABILITY & RELIABILITY!**

The turbocharger is the heart and soul of your diesel truck. Failure to properly cool your turbo before engine shut down can cause it to fail prematurely and can even lead to TOTAL ENGINE MELTDOWN. Diesel Turbo Lifesaver (DTLS) is the cure for problematic heat related turbocharger failures. DTLS makes cooling your turbo a set and forget operation – it idles your engine for proper turbo cooling and then shuts it off, all without needing the ignition key! This saves you the time and aggravation of waiting for the turbo to cool. Additionally, Diesel Turbo Lifesaver features built in SECURITY features to safeguard your vehicle from theft and can also be used as a PRE-LUBER (some vehicles) to further maximize the life of your engine. See other side for features that are packed into every Diesel Turbo Lifesaver!
